Investment objective

The Trusts seek the highest total return over time consistent with an emphasis on both capital growth and income.

Investment strategy

The Trusts pursue these objectives by investing primarily in a diversified portfolio of other T. Rowe Price common trust funds that represent various asset classes and sectors. The Trusts' allocations between stock and bond trusts will change over time in relation to each Trust's target retirement date, except for the Retirement Balanced Trust, which will maintain a constant neutral allocation of approximately 40% stock trusts and 60% bond trusts.

General note

An additional recordkeeping or administrative fee may be charged to participants investing plan assets in the fund. The recordkeeping fee will be deducted directly from participants' accounts. Please log on to your employer plans at Vanguard.com, or contact Participant Services at 1-800-523-1188, prior to investing, for additional fee information.

Plain talk about risk

The trust is subject to the risks of its underlying funds. As the underlying funds invest in stocks and bonds the trust is subject to several stock and bond market risks, any of which could cause an investor to lose money. However, based on the trust's current allocation between stocks and the less volatile asset class of bonds, the trust's overall level of risk should be higher than those trusts that invest the majority of their assets in bonds, but lower than those investing entirely in stocks. As the trust's allocation among underlying funds gradually changes, the trust's overall level of risk also will decline. In addition to the risks inherent in the asset classes of the underlying funds, the trust also is subject to asset allocation risk, which is the chance that the selection of underlying funds and the allocation of trust assets will cause the trust to underperform other trusts with a similar investment objective. Investments in target-date trusts are subject to the risks of their underlying funds. The year in the trust name refers to the approximate year when an investor in the trust would retire and leave the work force. The trust will gradually shift its emphasis from more aggressive investments to more conservative ones based on its target date. An investment in the target-date trust is not guaranteed at any time, including on or after the target date.
